

Call for Proposals: GreenStay Hotels Sustainability Upgrade Initiative

GreenStay Hotels, a growing hospitality brand dedicated to eco-conscious travel, is currently seeking proposals from experienced environmental engineering firms and sustainability consultants for the execution of a comprehensive sustainability upgrade across our hotel network. This initiative is part of our strategic vision to become a carbon-neutral hospitality group within the next five years.

Founded in 2010, GreenStay Hotels has grown to operate 18 properties across Portugal and Spain. Known for our eco-friendly accommodations and community engagement, we now seek to significantly expand our green operations by introducing advanced energy-saving systems, waste management enhancements, and environmentally sustainable guest amenities. Our ideal partners will bring both technical expertise and a strong track record in sustainability-driven hotel or commercial infrastructure projects.

We are looking for solutions that include but are not limited to solar energy integration, greywater recycling, intelligent HVAC systems, and zero-waste kitchen initiatives. Proposals that include lifecycle assessments, measurable carbon footprint reductions, and long-term operational cost savings will be prioritized.

An initial budget of €75,000 has been allocated for the project's planning and initial execution, covering feasibility assessments, engineering design, and procurement planning. Vendors are encouraged to submit innovative, scalable, and practical proposals that align with GreenStay's environmental values and brand standards.
